1877-1898: Growth, Transformation, and Gilded Age

INDUSTRIALIZATION, TECHNOLOGY, AND LABOR

Gilded Age: late 19th century U.S.; wealth of few hid poverty, corruption
technological (second industrial) revolution: based on steel, railroads, electricity, petroleum (oil)-based products; propelled by many factors:

- geography:** plentiful raw materials (crude oil, iron ore, coal, timber)
 - government:** courts, Congress supported free enterprise or laissez-faire capitalism (non-interference in business) and patent protection
 - technology:** inventions created new or larger business opportunities
- Examples:** Bessemer process ↑ steel output, ↓ cost (cities grew up rather than out); crude oil refined into cheap illuminants, fuels; electricity powered cities (Edison, Tesla/Westinghouse); telephone (Bell, Edison) sped long-distance communication (aided big companies); light bulb (Edison) "lengthened" daytime, ↑ productivity; ↑ patents
- entrepreneurship:** ambitious business leaders took risks, innovated, integrated, adopted technologies (↓ production costs) → **monopolies**
 - pros:** big businesses were efficient; ↑ access to infrastructure, goods, services at stable prices (e.g., cross-country train travel in days, not months; low-cost kerosene, not whale oil; telephone service)
 - cons:** big businesses used schemes to crush competition; work was unsafe/tedious with ↑ hours/↓ wages; **broke up unions/strikes**

Entrepreneur Integration Type Used Initially to Beat Competition

Carnegie/vertical: controlled all levels of production for 1 steel product: mines, mills, fabrication (rails), transport

Rockefeller/horizontal: controlled 1 level of production for entire industry: ~90% of U.S. refining capacity

Example: Andrew Carnegie's mills made low-cost steel, aiding growth. As a philanthropist, he funded educational and cultural projects. His book, *Gospel of Wealth* (1889), inspired philanthropy. In *Homestead* (1892) strike, his steelworkers and miners fought a deadly gun battle. The National Guard (govt) helped crush the union. A 12-hour workday and lower wages Carnegie wrote, "... we are [back] at work selling steel once again."

K of U	skilled-unskilled union; ↓ popularity after Homestead
AFL	skilled craft union; Samuel Gompers led; used boycotts; pursued collective bargaining; union-only shops
IWW	unskilled union; "Wobblies"; industrial unionism; strikes
ARU	unskilled railroad industry; Pullman (1894) strikers; federal force (force)

WESTWARD MIGRATION AND THE HOUSTON ACT

westward migration: demographic shift; 19% of pop. moved west (1900) of population; closed frontier (no more land left); key causes:

- Homestead Act:** 1862 law encouraged settlement west via 160-acre grants of public land (free) after 5 years of improvement
- Transcontinental Railroad:** east/west coast; lines connected distant areas; enabled cattle industry from Texas
- human, physical geography:** drought and hunger; new places

Example 1: Great Plains were forded; moved and finished goods were sold; cheap land attracted settlers, even to drought-stricken areas (rain followed the plow).

Example 2: Newspaper "gold fever" (Canada, Alaska) caused the famous massive 1896 gold rush. Most miners left broke.

Plains Indians: Whites' beliefs drove policies/acts.

Private Actions	U.S. Government Policy
<ul style="list-style-type: none"> protect, prohibit settlements in the west for army/forced treaties; Dawes Act American Indian reservations; 100's of A.I. have Indian quills Indian boarding schools; farms; 26 boarding schools violated treaty; violated treaty; violated treaty violated treaty; violated treaty; violated treaty 	<ul style="list-style-type: none"> Indian Removal Act Indian Citizenship Act Indian Reorganization Act

FARM ISSUES AND POPULISM

Poor economy for western (ex-Union) grain southerners (black/white) led to chronic debt.

- costs:** high-cost plows and reapers were vital; land and grain elevator had monopolies; sellers, not farmers
- revenue:** ↓; over-production, global competition (cotton)
- deflation:** tight money supply caused value of dollar to ↓ year (good for lenders, wage-earners, and rich, but bad for farmers)

Populists: third party political movement to address farmers won national election, but much of its platform eventually

William Jennings Bryan: 1896 Democratic presidential nominee; "Gold" speech co-opted Populist idea of free coinage of silver to combat deflation/keep farmers' vote; gold vs. silver split Democrats → McKinley won

URBANIZATION, NEW IMMIGRATION, AND CITY LIFE

U.S. urbanized as rural migrants and immigrants sought work in cities:

- push factors:** war, persecution, economic crisis, or poverty at home
- pull factors:** industrialization created unskilled workers; "American Dream" stories exaggerated opportunities; many believed in Europe

Example: NYC grew in mass from 0.9 million in 1800 → 5.6 million in 1920

new immigration: shift from Irish, Irish-American to southern/eastern European immigrants (Italians, Russians, Polish), from 1880-1920

city life: crowded, unsafe, unsanitary (used poor sanitation, disease)

- social:** ethnic enclaves formed; men, women, children lived on "factory time"; minorities faced discrimination; led to "slums"
- political:** "political machines" (bosses) used for vote-buying

Example: In *How the Other Half Lives*, Jacob Riis showed Jewish immigrants to New York's crowded Jewtown tenement in the East Village. Europe to escape persecution. English was "practical" unknown language. He wrote, "There are means the hardest kind of work almost from the cradle." Chinese concentrated Chinese neighborhoods and "nativist purists" led efforts to limit immigration restrictions (Chinese Exclusion Act (1882))

SOCIAL REFORM AND AMERICANIZATION OF IMMIGRANTS

social reform: Progressive Era philosophy; an duty to fix society's ills; for, energy, and purity crusades in cities

- reform:** campaigns against corrupt political machines (e.g., NYC Tammany Hall); lasting reform difficult; favors/loans helped poor; in 1883, Pendleton Civil Service Act passed after Garfield's assassination; upset spoils-seeker; some states then adopted civil service exams
- education:** free schools Americanized immigrants (taught culture); many Catholic schools formed to resist; literacy rates grew
- child labor:** classes, child care, social events helped and Americanized nearby immigrants (e.g., *Jane Addams'* Hull House, Chicago)
- temperance:** against alcohol; for living wage, 8-hr. workday, unions
- W.C. Sullivan's** campaign, "Do Everything" for women/children, fought alcohol with prayer, education, lobbying

1898-1920: Progressive Era and Rise of World Power

AMERICAN EXPANSIONISM AND SPANISH-AMERICAN WAR

expansionism: support for a stronger U.S. role in international affairs

- economic growth:** over-production of food, goods caused financial panics, depressions (drove down prices); U.S. needed new markets
- security:** in *The Influence of Sea Power Upon History, 1660-1783* (1890), **Alfred T. Mahan** argued for a strong U.S. navy, new bases to protect foreign markets (and investments) from rival nations (Eur./Jap.)
- mission work:** missionaries felt duty to spread Christian religion and western culture (language, law, capitalism) to "heathen masses"

Example: Americans invested in Hawaiian sugar plantations after 1875 free trade treaty, which also gave U.S. land for Pearl Harbor naval base. In 1892, businessmen, missionaries, and U.S. Marines overthrew monarchy and chose **Sanford B. Dole** as president. He pursued annexation to U.S. (approved in 1898), citing "American effort ... in building up the Christian civilization," its "geographical position," and "profitable reciprocal commercial interests."

- vitality:** **Henry Cabot Lodge** and **Theodore Roosevelt (T.R.)** believed new frontiers would energize American spirit, keep U.S. competitive

Expansionism, yellow journalism (sensational) and Proctor report on Spain's brutality in Cuba, de Lôme letter, and U.S.S. Maine explosion fueled pro-war view. Spanish-American War was turning point for U.S.:
